Summary

Our modular and connectable pen and tool holder for the laboratory and office - designed by our Design Technology Fellow Matias Hurtado Labarca as a part of the [LIBRE hub](#) project

What's special about this model, given that there are already so many holders?

The connector pins have a flex-spacing that enables a perfect fit, connecting all printed holders well no matter the exact printing tolerance.

You can copy and modify the free [CAD design](#).

// The tolerances may vary depending on your printer. If the fit is too tight you can carefully use a lighter to make it more malleable and allow it to slide more easily.
